

# TAKE CONTROL.

## An AIRETITE Investment

We're proud to say we make the finest, most cost-effective windows available. But don't just take our word for it. Consider our superior overall window U-value rating tested according to NFRC (National Fenestration Rating Council) standards, or to our Energy Star approval from the U.S. Department of Energy for outstanding savings on utility costs. Accolades like this are proof positive that Airetite E Series Windows offer outstanding insulation and value.

### Air Infiltration Rates

With a constant 25 mile per hour wind, this test shows how many cubic ft. of air infiltrated through each lineal foot of the window each minute.

All results are direct from each manufacturer's current published product specifications. Copies are available upon request. When comparing window brands, be certain to get actual test result copies from each manufacturer.

### Glass R-Factor

E Series Windows offers an entire range of high performing products ranging in R-Values from 4.35 to 10. For the product that provides the best performance and overall insulating value for your home, please consult with your authorized Airetite dealer. E Series Windows utilize AFG's Comfort Ti-AC40 High Performance Insulated Glass designed to block out heat in the summer and insulate your home in the winter!

The thermal performance rating (U-Value) is determined according to NFRC's uniform set of procedures in order to provide fair and accurate comparisons of all brands of windows. All information is direct from each manufacturer's current published product specifications.

### Overall Residential U-Value
